

## Decision Authorization Packet

### Attempt

Use the AI-generated recommendation and draft language to guide an advisor and potentially send customer-facing investment or lending outreach.

### Standing

Authority is insufficient for autonomous customer-facing release. Supervisory review is required before a protected effect may form.

### Frozen authorization input

The proposed movement is frozen as the object under review. A later change of amount, product, or audience is a new action.

### Decision API

ESCALATE. The Decision API is the sole ALLOW / BLOCK / ESCALATE authority. Scores and benchmarks are explanatory and do not authorize release.

### Release control

Release authorized = false. Status = WITHHELD\_PENDING\_REVIEW. Routed to human review.

### Consequence custody

Protected effect formed = false. Commit count = 0.

### Human closure

Qualified supervisory review is required before any customer-facing release.

### Review-gated feedback

Any learning signal remains a review-gated candidate. History is not a second authorization authority.
