ONTOGUARD / ENTERPRISE & OEM INFRASTRUCTURE

Paid, scoped evaluation

One protected action

Bring a typed action, trusted authority source, safe target route, test cases and the business authority owner.

Deliverables

Tested integration, refusal and execution evidence, measured latency, and a written limits statement. Agree duration and acceptance criteria before work begins.

Participants

Business authority owner, platform engineer, security or audit reviewer. SI evaluation may be scoped separately using buyer-owned source material.

Public evidence covers reviewed integrations and controlled reference tests, not customer deployments. No guarantee of ROI, universal enforcement or semantic correctness.

Evidence hub · OEM integration kit
