ONTOGUARD / ENTERPRISE & OEM INFRASTRUCTURE

Security and agent-platform OEM licensing

Why embed

Bind exact actor, operation, target and material parameters to current trusted authority. Recheck immediately before protected effect. A trusted executor must verify the signed go-ahead. Separate recorded outcome from permission and keep unknown outcomes unknown.

Integration surface

Typed action schema, trusted-context adapters, trusted executor, standalone verifier, TRACE and OpenShell supervisor integration.

Commercial path

Paid, scoped evaluation of one protected action. Embedded OEM or field-of-use licensing. Support and escrow terms are negotiated; no commitment here.

Reviewed evidence

PR #201: 27 adapter tests; exact $250,000 committed once with TRACE; $260,000 refused, zero commits/no TRACE. PR #236: 36 integration tests; 97 negative probes refused, 4 positive exact actions executed. Independently reviewed bounded integrations, not whole-runtime certification.

Public evidence covers reviewed integrations and controlled reference tests, not customer deployments. No guarantee of ROI, universal enforcement or semantic correctness.
